Summary

Senior Full-Stack Software Developer with 4+ years of experience building scalable SaaS and financial systems. Strong focus on React, Next.js, and TypeScript, with deep experience in system design and API architecture. Delivers production-ready features end-to-end and simplifies complex data-driven workflows into intuitive user-facing applications. Built and operated systems supporting thousands of concurrent users and hundreds of thousands of daily requests.

Professional Experience

Paireeo Inc.

Edmonton, AB | 2025 to Present

Lead Software Developer

- Architected and delivered a multi-tenant SaaS consignment and inventory platform, owning system design, data models, API architecture, and cloud deployment.
- Built and maintained frontend applications using React, Next.js, and TypeScript, delivering scalable and responsive user experiences.
- Designed and implemented backend services and APIs using TypeScript, Ruby, Go, and PostgreSQL to support real-time financial workflows across hundreds of merchants and thousands of daily transactions.
- Established engineering standards, including CI/CD pipelines, documentation practices, and strategies to improve development consistency.
- Led end-to-end technical execution across multiple products, from planning and discovery to production and release. Collaborated directly with merchants to translate complex operational workflows into scalable product features.

First Canadian Financial Group

Sherwood Park, AB | 2023 to 2025

Full-Stack Software Developer

- Developed and maintained mission-critical finance and insurance systems, ensuring regulatory compliance and audit accuracy.
- Led modernization efforts by researching, planning, and implementing new systems using Next.js and TypeScript to replace legacy stacks.
- Led the design and implementation of REST APIs to enable secure third-party integrations and automated data exchange.
- Audited and documented legacy systems to improve maintainability and support modernization efforts.
- Built reporting and data analysis tools using Python to support business operations and compliance needs.

Chesney Management Group LTD.

Calgary, AB | 2021 to 2023

Full-Stack Software Developer

- Developed and maintained an internal ERP system supporting inventory, reporting, and e-commerce operations.
- Built and maintained modern web applications using TypeScript, Next.js, and PostgreSQL, replacing legacy PHP-based systems.
- Managed cloud infrastructure across AWS and DigitalOcean and implemented CI/CD pipelines for automated deployments.
- Created automation tools using Python, Bash, and VBA to reduce manual workflows and improve operational efficiency. Purchase orders, sale tracking, payroll, accounts payable.

Technical Skills

Languages: JavaScript/TypeScript, Bash, Python, Go/Golang, Dart, Java, PHP, Perl

Frontend: React, NEXT.js, Remix, Flutter, Server-Side Rendering (SSR), State Management

Backend: Express.js, Koa.js, NestJS, Laravel, REST APIs, API Design

Databases: PostgreSQL, MySQL, MongoDB, DB2 (DB2 for i), Retrieval-Augmented Generation (RAG), Schema Design

Cloud & DevOps: Amazon Web Services (AWS), DigitalOcean, Google Cloud Platform (GCP), Docker, CI/CD

Architecture: System Design, Scalable SaaS Platforms, Multi-Tenant Systems

Projects

Grove | [GitHub](#)

2025

- Built an MCP-compatible agentic memory service to solve context loss across AI agent sessions and tool boundaries
- Designed a RAG (Retrieval-Augmented Generation) backend backed by Qdrant for fast semantic retrieval of persistent memory across agents.
- Built with — Go, Qdrant

Fitr | [GitHub](#)

2024 — Present

Founding Developer

- Co-developed an AI-powered style engine and identity platform, that provides wardrobe management and personalized recommendations.
- Developed a personalized recommendation engine that segments and identifies clothing items from photos using computer vision, then maps user style identity to clothing suggestions based on wardrobe and preferences.
- Designed a clear and intuitive user interface for a friendly user experience. Contributed Go tooling and API endpoints to the broader app backend
- Built with — Go, Flutter, Dart, Postgres, pgvector, Redis

Burrow | [GitHub](#)

2024

- Built a self-hosted alternative to Ngrok for securely exposing local services via public HTTPS subdomains and TCP tunnels.
- Implemented a reverse proxy layer in Go with subdomain routing, for developer workflows, webhook testing, remote access, and temporary service exposure. Designed a Redis backed tunnel tracking and session caching for fast reconnection and low-latency state lookups
- Built with — Go, Nginx, Redis

Projects Cont.

InkByte GitHub	2021
• Built an end-to-end link shortener using Next.js, TypeScript, and Koa.js. • Implemented server-side rendering, REST APIs, and database-driven routing. • Built with — TypeScript, NEXT.JS, Postgres	
GoBox GitHub	2017
• Developed a file upload and sharing service using Go and a JavaScript frontend. • Implemented HTTP servers, multipart uploads, and filesystem-based storage. • Explored foundational backend concepts, including request handling and file I/O. • Built with — Go, JavaScript, jQuery	

Leadership Experience

Calgary Hornets Rugby Club <i>VP of Marketing</i>	Calgary, AB 2022 to 2023
• Managed online, social media, and print media channels for my local rugby club. Leveraged graphic design, and video editing skills to create visually stunning illustrations and content. • Collaborated with executive members to align marketing efforts with club objectives. Developing marketing strategies to improve outreach and engagement of communication. • Assisted the development of a revitalized website using PHP, and WordPress. • Demonstrated leadership, communication, and cross-functional collaboration skills applied in professional engineering roles.	
The King's University Computer Science Club <i>President</i>	Edmonton, AB 2019 to 2021
• Led and organized technical workshops, presentations, and mentorship sessions for students. • Invited and coordinated industry speakers to provide career insights and networking opportunities. • Fostered a collaborative learning environment to improve engagement and participation in computer science.	

Volunteer Experience

South Sudanese Youth of Canada <i>Marketing Assistant / Event Organizer</i>	Calgary, AB 2021 to 2023
• Developed marketing materials and campaigns for community events across digital and print channels. • Assisted in organizing and coordinating events across Canada, supporting community engagement initiatives. • Designed and delivered youth-focused workshops on computer science and technology topics.	
The King's University Games Club <i>Event Organizer</i>	Edmonton, AB 2018 to 2021
• Organized and facilitated weekly events and gaming tournaments, fostering community participation. • Coordinated logistics and programming for tabletop and video game events.	

Education

The King's University, Edmonton, AB
<i>B.Sc. Computer Science</i>
Minor Communication Arts
